

Signs You Might Have an Undiagnosed Heart Condition

MARCH 21ST, 2023 @ 12:00 PM

Join us **Tuesday, March 21st, 2023** for an informative webinar presentation and discussion on **Signs You Might Have an Undiagnosed Heart Condition.**

How do you know if you have an underlying heart condition in advance? Not all heart problems manifest themselves through clear warning signs, like a sudden pain in the chest, which is why a lot of them go undiagnosed. This can easily become a problem since most health conditions that are not diagnosed early on may progress into a more advanced stage and may become more difficult to treat. The good news is there are often early signs that something with your heart isn't right. This presentation is led by **Cardiothoracic Surgery Specialist, Juan Grau, M.D.** A moderated Q&A will follow the presentation.
